

# Asus\_Harvest

- The link provided [https://github.com/MikimotoH/Asus\\_Harvest](https://github.com/MikimotoH/Asus_Harvest) is 7 years old and the links in the code are broken.
- Investigated for the new link and found <https://www.asus.com/de/support/Download-Center/>
- There are fields to search for the required firmware to be downloaded. The fields are
  1. Product Type
  2. Product Line
  3. Product Model
- As per the information investigate the following
  1. Network > Business Switches >
    - a. XG-C100C
    - b. XG-C100F
    - c. XG-U2008
  2. Network > Business WLAN Router >
    - a. AiMesh AC1900 WiFi System (RT-AC67U 2 Pack)
    - b. AiMesh AC1900 WiFi System (RT-AC68U 2 Pack)
    - c. BRT-AC828
- From the above link crawling using selenium is required to get the metadata from the support website and store it into the database. Compare the data in the database and if not founded download the required updates from the website.

## Challenges

What are the required products and models for firmware download?
